OFFICE OF THE ASSISTANT TO THE SECRETARY OF DEFENSE  
1400 DEFENSE PENTAGON  
WASHINGTON, D.C. 20301-1400

4 AUG 1994

Ref: 94-F-1255

Mary Beth Sweetland  
Research and Investigations  
People for the Ethical Treatment of Animals  
P.O. Box 42516  
Washington DC 20015-0516

Dear Ms. Sweetland:

This responds to your February 17, 1994, Freedom of Information Act (FOIA) request filed with the Office of the Under Secretary of Defense (Acquisition and Technology), referred to the Defense Nuclear Agency and subsequently referred to the Secretary of Defense and received in this Directorate on June 8, 1994.

We have completed our review of the documents responsive to your request which were referred to us by the Armed Forces Radiobiology Research Institute. The documents and a copy of your request are at the enclosure. There are no assessable fees in this instance.

Sincerely,

W. M. McDonald  
Director  
Freedom of Information  
and Security Review

Enclosures:  
As stated

(301) 770 - PETA  
FAX (301) 770 - 8969

February 17, 1994

Kelly D. Akers  
FOIA Program Manager  
Office of the Under Secretary of Defense  
(Acquisition & Technology)  
Defense Technical Information Center  
Cameron Station  
Alexandria, VA 22304-6145

Dear Ms. Akers:

This request for records is made under the Federal Freedom of Information Act, 5 U.S.C. Sec 552.

People for the Ethical Treatment of Animals makes this request. We are a non-profit organization, based in Washington, D.C., dedicated to educating the public about issues concerning animal rights. People for the Ethical Treatment of Animals may be referred to hereafter as "the requester."

This request is for copies of abstracts of projects in progress that involve the use of dogs, cats, primates, pigs, or birds in experimentation whether the projects are funded by DOD or conducted in DOD facilities with grant monies from other sources. Please include Veterans Administration hospitals in this request.

If any records or documents pertaining to the above request are considered to be exempt from release, please segregate and provide access to non-exempt portions and justify deletions by reference to specific exemptions in the Freedom of Information Act.

The requester is prepared to pay all reasonable search and duplication fees relating to this request up to the amount of fifty dollars (\$50.00), but asks that such fees be waived, or at least reduced, pursuant to Sec.552 (a) (4) (iii) of the Freedom of Information Act, which provides that provides that

Encl 3

[d]ocuments shall be furnished without any charge or at a charge reduced below the fees established under clause (ii) ["reasonable standard charges"] if disclosure of the information is in the public interest because it is likely to contribute significantly to public understanding of the operations or activities of the government and is not primarily in the commercial interest of the requester.

Requester satisfies the cited fee waiver/reduction provision because disclosure of the requested information would be likely to contribute significantly to public understanding of issues related to the care of animals as required by the U.S. Fish & Wildlife Service, and the requester, a non-profit public interest organization whose federal tax-exempt number is 521218336, has no commercial interest in disclosure of the information requested.

If the waiver or reduction is denied, and fees are expected to exceed fifty dollars (\$50.00), kindly notify requester by telephone before this disclosure request is processed, so that the requester may decide whether to pay the disputed fees, or, instead, to appeal the denial of the request for waiver or reduction.

I may be reached during business hours at (301)770-7444. If you have any questions regarding any aspect of this request, please contact me by telephone rather than by mail in order to expedite timely disclosure of the requested information.

Thank you for your assistance. I will look forward to receiving your reply within ten business days.

Sincerely,

  
Mary Beth Sweetland  
Research & Investigations

22. KEYWORDS (Precede EACH with Security Classification Code) (U) Area Postrema; (U) Performance Decrement: (U) Radiation-induced Diarrhea									
23. TECHNICAL OBJECTIVE 24. APPROACH 25. PROGRESS (Precede last of each with Security Classification Code)									
<p>23. (U) Exposure to ionizing radiation results in a well defined symptomatology which is related to radiation-induced gastrointestinal dysfunction. Sublethal doses produce nausea, vomiting, gastric stasis, and diarrhea which lead to severe incapacitation of irradiated personnel and decreased efficacy of orally administered medications. Supralethal doses result in the gastrointestinal syndrome characterized by fluid and electrolyte loss and septicemia. This work unit will study the mechanisms underlying radiation effects. The relation of intestinal motility and enteric infection to radiation-induced emesis and new treatments for gastrointestinal dysfunction will be evaluated.</p> <p>24. (U) Studies will use both in vivo and vitro model systems. A variety of physiological parameters will be measured in irradiated animals and tissue in vitro and compared to non-irradiated controls. Plasma values of putative emetics and gastrointestinal modulators will be correlated with changes in function. Specific antagonists will be assessed for their ability to mitigate radiation effects.</p> <p>25. (U) Two different 5-HT<sub>2</sub> receptor antagonists were shown to ameliorate emesis evoked in the ferret by neutron irradiation. Metabolic blockade of the arachidonic acid metabolism was shown to alter contractility of smooth muscle in vitro. A motilin analog stimulated gastric emptying and gastric motility in a dose-dependent manner in the pre-irradiated basal state. Preliminary data in two animals indicated that this agent can reverse radiation-induced gastric stasis while not modifying the emetic response. A total of 2 papers and 5 abstracts were published.</p>

23. TECHNICAL OBJECTIVE 24. APPROACH 25. PROGRESS (Precede text of each with Security Classification Code)							
<p>23. (U) Objective: Establish animal models for evaluating effects of ionizing radiation on complex behavioral tasks. Establish the role of behavioral, biological and radiobiological factors that affect these performance decrements. Evaluate the effects of radioprotectant and antiemetic drugs on performance, and determine their ability to counteract performance decrements produced by radiation.</p> <p>24. (U) Approach: Animals are trained to perform complex behavioral tasks. Dose-effect curves for disruption of performance by radiation, radioprotectants and antiemetics are determined. Radioprotectants and antiemetics are tested for efficacy in blocking radiation-induced performance decrements. Manipulations of behavioral and biological factors are performed to determine their relative contributions to radiation-induced performance decrements.</p> <p>25. (U) Progress: Repeated low-doses of gamma radiation cause progressive deteriorations in cognitive performance. Acute sublethal doses of ionizing radiation increase behavioral disruptions induced by the central nervous stimulant amphetamine. 5-HT3-antagonist antiemetic drugs do not prevent postirradiation anorexia, nor do they prevent chemotherapy-induced behavioral toxicity. The glucocorticoid dexamethasone prevented chemotherapy-induced behavioral toxicity. 5-HT3 antagonists are not behaviorally toxic when administered alone, but they exacerbate the behavioral toxicity of metoclopramide, a widely used antiemetic drug. Behavioral toxicity caused by several other drugs (the anticonvulsant and anxiolytic chlordiazepoxide, the stimulant caffeine, and the motion sickness drugs scopolamine and buspirone) was only minimally increased by 5-HT3-antagonist antiemetic drugs. Strong environmental stimulus control can attenuate performance decrements caused by the sedative pentobarbital, the stimulant amphetamine, the anaesthetic ketamine, and the antiemetic 8-OH-DPAT.</p>

23. TECHNICAL OBJECTIVE 24. APPROACH 25. PROGRESS (Precede text of each with Security Classification Code)

23. (U) Measure the size of the Hematopoietic Stem Cell (HSC) population in mice and monkeys to either prove or disprove that all mammals have the same total number of HSC and to determine how radiation affects the HSC population.

24. (U) If a female is heterozygous for a genetic locus (A or B) located on the X-chromosome and one X-chromosome is randomly inactivated, then most cell compartments, including the HSC compartment, are mosaics composed of either A or B cells. Using this system, the total number of HSC can be determined by the binomial formula  $n=pq/s^2$  where p is the fraction of "A" HSC, q is the fraction "B" HSC,  $s^2$  is the variance of p, and n is the total number of HSC.

25 (U) Mice were given whole body irradiation to total doses of 3, 4, 5, 6, and 7 Gy. The number of hematopoietic stem cells surviving these radiation doses was calculated using the corrected equation  $n=pq/(s^2_{\text{post-irradiation}}-s^2_{\text{pre-irradiation}})$ . To date the number of stem cell surviving 3 Gy irradiation was found to be 333 cells; 4 Gy, 33 cells; 5 Gy, not yet determined; 6 Gy, 5 cells; and 7 Gy, 4 cells. This preliminary data might suggest that stem cells surviving high dose radiation are part of an unique stem cell sub-population characterized by a rather large  $D_0$ .

(U) Approach: Animals are trained to perform complex behavioral tasks. Dose-effect curves for disruption of performance by radiation, radioprotectants and antiemetics are induced performance decrements. Manipulations of behavioral and biological factors are decrements.</p> <p>25. (U) Progress: Repeated low-doses of gamma radiation cause progressive deteriorations in cognitive performance. Acute sublethal doses of ionizing radiation increase behavioral disruptions induced by the central nervous stimulant amphetamine. 5-HT3-antagonist antiemetic drugs do not prevent postirradiation anorexia, nor do they prevent chemotherapy-induced behavioral toxicity. The glucocorticoid dexamethasone prevented chemotherapy-induced behavioral toxicity. 5-HT3 antagonists are not behaviorally toxic when administered alone, but they exacerbate the behavioral toxicity of metoclopramide, a widely used antiemetic drug. Behavioral toxicity caused by several other drugs (the anticonvulsant and anxiolytic chlordiazepoxide, the stimulant caffeine, and the motion sickness drugs scopolamine and buspirone) was only minimally increased by 5-HT3-antagonist antiemetic drugs. Strong environmental stimulus control can attenuate performance decrements caused by the sedative pentobarbital, the stimulant amphetamine, the anaesthetic ketamine, and the antiemetic 8-OH-DPAT.</p>

23. TECHNICAL OBJECTIVE 24. APPROACH 25. PROGRESS (Precede text of each with Security Classification Code)

23. (U) Measure the size of the Hematopoietic Stem Cell (HSC) population in mice and monkeys to either prove or disprove that all mammals have the same total number of HSC and to determine how radiation affects the HSC population.

24. (U) If a female is heterozygous for a genetic locus (A or B) located on the X-chromosome and one X-chromosome is randomly inactivated, then most cell compartments, including the HSC compartment, are mosaics composed of either A or B cells. Using this system, the total number of HSC can be determined by the binomial formula  $n=pq/s^2$  where p is the fraction of 'A' HSC, q is the fraction 'B' HSC,  $s^2$  is the variance of p, and n is the total number of HSC.

25 (U) Mice were given whole body irradiation to total doses of 3, 4, 5, 6, and 7 Gy. The number of hematopoietic stem cells surviving these radiation doses was calculated using the corrected equation  $n=pq/(s^2_{\text{post-irradiation}} - s^2_{\text{pre-irradiation}})$ . To date the number of stem cell surviving 3 Gy irradiation was found to be 333 cells; 4 Gy, 33 cells; 5 Gy, not yet determined; 6 Gy, 5 cells; and 7 Gy, 4 cells. This preliminary data might suggest that stem cells surviving high dose radiation are part of an unique stem cell sub-population characterized by a rather large  $D_0$ .

MEMORANDUM FOR

THE SECRETARY OF DEFENSE

SUBJECT: The Rescue of the SS Mayaguez and its Crew

In the aftermath of the operation to rescue the SS Mayaguez and its crew, I consider it essential that we evaluate, as a means of insuring the most effective possible performance in future crises, the manner in which this operation was planned and conducted.

In order to facilitate this evaluation, I would like to receive, on a priority basis, the following:

- (a) A detailed and comprehensive chronological exposition of events and activities from the time of the seizure of the SS Mayaguez through the completion of the evacuation of Marines from Koh Tang Island, focussed on the activities of your Department.
- (b) A copy of each order, verbal or written, which was issued directing military plans and operations, from the time of the basic planning decisions made at the National Security Council meeting at 10:30 p.m. on May 13 through the evacuation from Koh Tang Island. Included should be all orders from you to the Chairman, Joint Chiefs of Staff, from the Joint Chiefs of Staff to the Commander, Pacific Command, and from that Commander to subordinate commanders in the field.
- (c) Any observations or suggestions which you consider would contribute to improvement in the ability of the National Security Council machinery to deal effectively with crisis situations.

This evaluation should be conducted on a very close hold basis. The material in (b) above should be submitted by noon, Tuesday, May 20, and the remainder by close of business Friday, May 23. I have requested similar submissions from the Secretary of State, the Director of Central Intelligence, and the Assistant to the President for National Security Affairs.
